

Product FAQ's

Q: *Does the product have an odor?*

A: Yes, upon initial application due to its organic material "sugar beets". The odor will subside after a few days.

Q: *What Colour is it?*

A: FUSION Dust Control's natural colour is dark brown, therefore it will apply similar.

Q: *Will the product stain?*

A: No, the product is completely water soluble (washes off with water) and will not leave any visible signs.

Q: *What is the application rate?*

A: Approximately 1 litre per 5-8 sq ft. Customer applications: please consider two smaller applications instead of one single. Results have shown that a longer absorption time is more effective. Thus applying at the end of a day/week is beneficial.

Q: *Why is it sticky immediately after application?*

A: The product will be sticky after application for approximately 8-15 hrs. This is the drying time that is essential to the longevity of the dust control. Once dried, product will no longer be tacky.

Q: *Will this product be greasy?*

A: FUSION Dust Control does not contain any greasy characteristics such as petroleum oils due to its' organic material; it works simply by binding dust particles together.

Q: *How long will an application last?*

A: Great question! We would have to get a response from Mother Nature herself. There are so many variables that come into play for the longevity of any dust control product; weather, traffic volumes and load weights. Many of our customers will get an entire summer season with just one application!

Q: *If some of the product gets on my grass will it kill it?*

A: No, it will not kill the grass. It may cause the grass to stress and go yellow which will correct itself in a couple of weeks.
