

Dust Control

DUST SUPPRESSANT LIQUID & ROADBED/SOIL STABILIZATION AID

Fusion Dust Control is a cost-effective dust suppressant and soil stabilizer that can be used in a variety of application methods to create a more durable surface with increased load-bearing capacity. Typical materials that have been successfully treated with Fusion Dust Control include soil, aggregate blends and chip-and-seal surfaces.

Fusion Dust Control is a biodegradable, nontoxic and environmentally safe product derived from natural ingredients. The main ingredient for Fusion Dust Control is Desugared Sugar Beet Juice.

Product Advantages

- Dust control calcium chloride works by holding moisture in the roadbed. Fusion Dust Control works by coating and binding surface material. This treatment rejuvenates with moisture, is easy to maintain, keeps dust particles bound and offers a superior surface.
- Encapsulates get brittle, shatter, wash away and are poor for the environment. Fusion Dust Control creates a more flexible surface and is environmentally safe.
- When Fusion Dust Control is used on gravel roads, it reduces or eliminates the high cost of adding fresh gravel and frequently grading the road surface.
- Chip-and seal surfaces last much longer when Fusion Dust Control is used to treat the road base. In actual applications, chip and seal surfaces last up to twice as long when applied onto a FUSION DUST CONTROL treated base.

Fusion Dust Control is distributed Nationwide, call
